

In the April 2007 newsletter, the Forestry Committee asked that your lot pins be staked so we can easily see your lot boundaries when on your land looking for MPB infestation. Once again we are asking that you put at least a 3ft high stake at each of your lot pins with colorful flagging at the top. The Forestry Committee spends an inordinate amount of time defining each lot's border while doing our annual beetle inspections. When there is deep snow or vegetation obscuring the lot pins it makes our job almost impossible.
